

# PC EFTPOS

Integrating payment with your POS

PC EFTPOS integrates seamlessly with your POS, ensuring simple, quick and accurate transactions for you and your customers.

## Features

- Integrates with your existing EFTPOS New Zealand certified POS software
- Payments initiated on your POS are sent directly to the PC EFTPOS PIN pad, eliminating the impact of double-keying errors on reconciliation
- No need for dedicated terminal connectivity as PC EFTPOS uses the existing network infrastructure at the POS
- Supports multiple POS connectivity options including IP and GPRS
- EOv capability offers continued transacting if eftpos goes down
- VeriFone VX 820 PIN pad from the latest Evolution range of terminals features large colour, touch screen, sleek design and minimal countertop footprint
- Supports Contactless payments

## How does PC EFTPOS work?

- PC EFTPOS utilises the existing internet connection and POS system to complete transactions, decreasing cabling and port requirements
- PC EFTPOS works with a wide range of POS software solutions and integrates seamlessly with your POS system to create a smooth payments process
- The PC EFTPOS software guides your staff through the transaction on your POS screen, while your customer enters their details on the PIN pad
- The transaction is then sent back to the POS to notify your staff whether or not the transaction was successful and print a single receipt on the POS printer
