

Vault - EFTpos Evolution

Vault is an integrated solution for VeriFone terminals that links your Point of Sale (POS) to your eftpos terminal and connects to the Paymark network. The Vault solution uses the VX 820 PIN pad.

Through its unique payment architecture, Vault delivers integrated payment in a manner that is easy to deploy, easy to operate and easy to upgrade. Best of all, Vault has the scalability to meet the needs of any business, big or small. Delivering all the benefits of a POS integrated payment system, Vault eliminates the complexity associated with managing traditional PC based software payment applications.

Features

- Increases accuracy by eliminating double-entry keying errors
- Allows multiple stores to consolidate eftpos transactions via a company WAN to one single point for connection via IP to Paymark
- Deployments can range from one lane to multiple lanes, across one store or multiple stores
- Automatic software updates ensure Vault lanes are remotely updated to the latest software version available
- Accepts Contactless payments

Requirements

- Windows XP or above and the .NET 2.0 or above framework must be installed on the Point Of Sale (POS) PC
- You must support a broadband connection to Paymark and have the ability to connect the Vault hardware to an Ethernet port
- All terminals must have a fixed IP address
- Independent network support is also required (*EFTPOS New Zealand is not able to assist in troubleshooting on customer networks*).
